

Kramer Control Dashboard

Cloud-Based Monitoring & Remote Control Service

Kramer Control Dashboard is a cloud-based service that enables an administrator to manage, monitor and remotely control devices in each space related to the project. The platform boasts automatic data gathering about room usage, device health and energy consumption, all presented in a powerful dashboard that enables acting on real-time data-driven analytics, alerts and reports. Data gathering requires no pre-configuration. Once Dashboard is activated you are ready to go

FEATURES

Always Up-to-Date - No tedious updates and device SW upgrades. Kramer Control is automatically and seamlessly updated from the cloud

Borderless Management - Setup and access your dashboard from anywhere in the world

Smart IP Infrastructure - Leverage existing IP network infrastructure, so you can scale up as required without needing to invest in extending or replacing the network

Real-World Project Organization - Create a project layout by room/floor/building

Automatic Data Collection - Room usage, device health, device usage, and energy consumption. Data gathering requires no pre-configuration and can be disabled if necessary

Device Status & Alert - Immediately recognizes and organically understands status and issues that occur with connected devices

Dashboard Ready to Go - Do not waste time and energy building dashboards from scratch. Our pre-configured Dashboard hits the ground running
