

PLANNING THE LOCATION

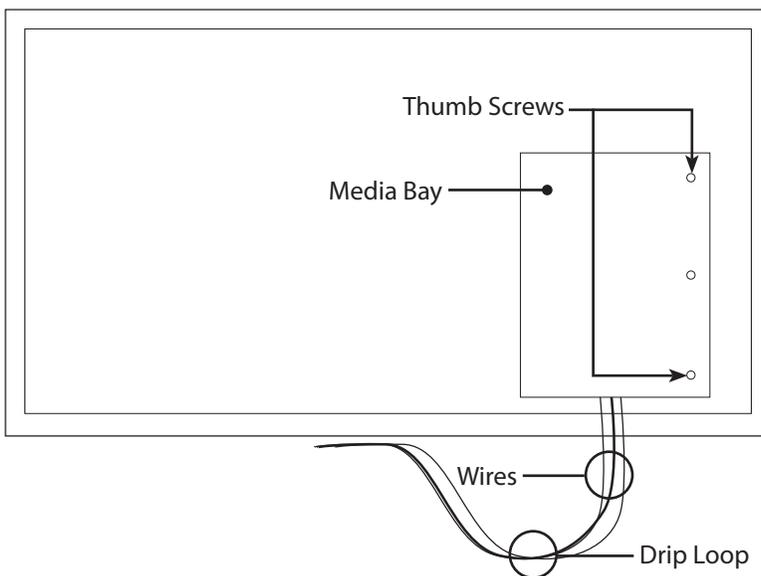

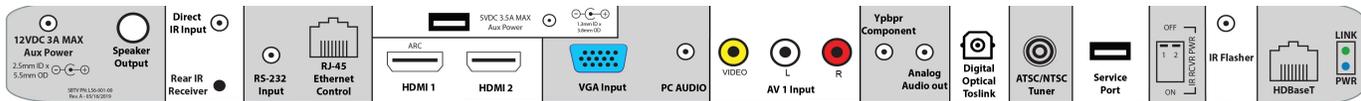

- Be sure to check the sun’s location throughout the day and throughout the year.
- The TV should be installed in a location that does not receive direct sunlight on the screen at any time. Direct sunlight can cause dark areas to form on the screen.
- Consider using an articulating mount so the TV can be moved away from the sun if necessary.

SOURCES/WHAT TO WATCH

- Connect the TV to the preferred Media Source.
- Some 3rd party media devices can be stored completely inside media bay depending on the strength of the wireless signal or length of the Wifi Cable.
- For more information on connection types visit www.sunbritev.com to download the operator’s manual.

- Ensure all wires are run out the bottom of the media bay before closing securely and leave a drip loop with any exiting cables.
- Connect power to a GFCI certified outlet and use remote to power on TV.
- Press the Menu button and follow the on-screen instructions.
- For more information on programming or for troubleshooting visit www.sunbritev.com to download the operators manual.

WHAT'S IN THE BOX

Note: Veranda Series TVs come with built in Speakers. Signature and Pro Series do not, and a separate audio source is required for sound. All SunBrite TVs are weatherproof when installed properly; brightness and type of installation location vary by model.

Standard remote with batteries

Welcome Packet

OPTIONAL ACCESSORIES NOT INCLUDED

Standard and Premium SunBrite Soundbars

Premium Dust Cover

Note For Professional Installers Only: The default login for local UI integration into control systems is Username: sunbriteTV, password: sunbriteTV. You will be prompted to change both upon sign on.
