

VSM

Management Platform for VIA Devices

VSM (VIA Site Management) is an advanced software management platform that enables an administrator to deploy, manage, configure, and monitor all connected VIA devices from one central location. VSM is compatible with all VIA device models and is available in on-prem and cloud-based versions

FEATURES

Deployment - Easily on-board all your VIA devices across networks

Management - Organize VIA devices and create settings templates

Configuration - Set defaults and configure features

Health Checking - Monitor storage level, On/Off statuses, and current firmware version

Usage Analytics - Create usage reports for all of your VIA devices

Alerts - Set customized messages to display on VIA screens as needed

Digital Signage - Manage content, create templates and schedule campaigns

Automated Device Updating - Schedule and automatically push new firmware updates

Available in On-Premises and Cloud-Based Versions

Free Demo - Try VSM managing functions for up to 3 devices in the on-prem version
